

# **Elektron Əmtəə-Nəqliyyat Qaiməsi**

## **Şirkətlərin daxili sistemləri üçün integrasiya dokumentasiyası**

Versiya: 2.0

Tarix. 07 Sentyabr 2024

### **Qısa məlumat**

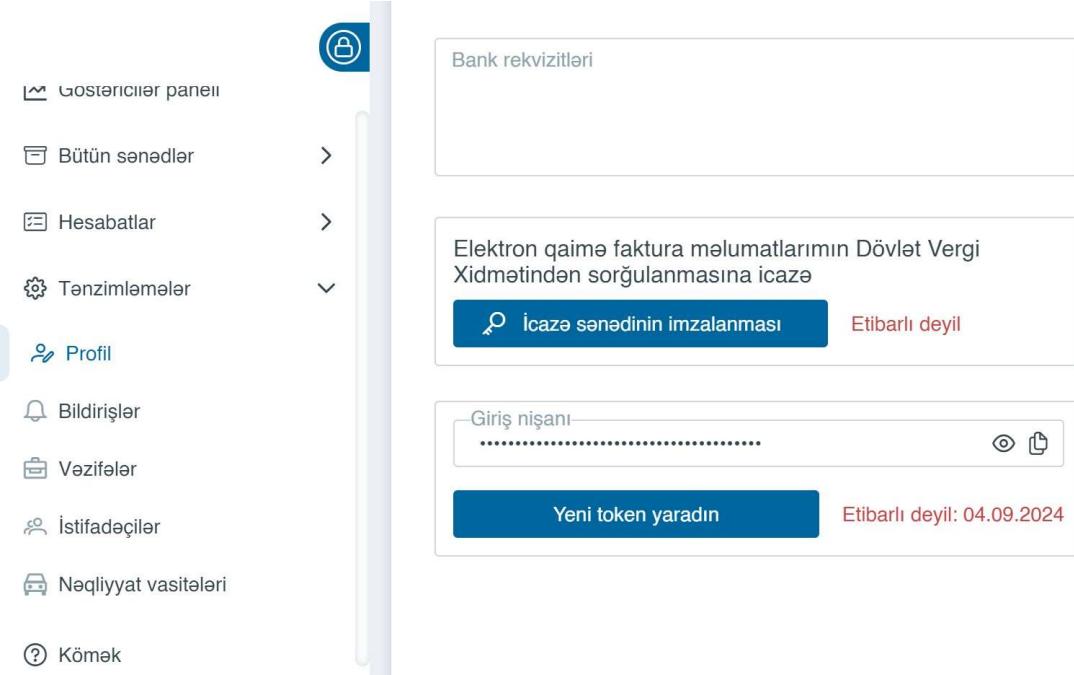

Şirkətlərin Elektron Əmtəə-Nəqliyyat Qaimələrini sürətli bir şəkildə yarada bilmələri üçün servislər və servislərdən istifadə qaydasını əks etdirən dokumentasiya sənədi hazırlanmışdır.

### **Necə istifadə etməli**

İlk öncə rəhbər şəxs sistemə daxil olmalı, profil bölməsinə keçid etməli və servislərin istifadə edilə bilməsi üçün token əldə etməlidir.

Şəkil 1. E-xidmet.ayna.gov.az portalından digital login vasitəsi ilə daxil olma

Şəkil 2. Tənzimləmələr bölməsindən profil səhifəsinə kecid və tokenin yaradılması

*Qeyd: Servislərdən istifadə qaydası və onlar haqqında daha ətraflı məlumat dokumentasiya sənədində qeyd edilmişdir. Dokumentasiyanın hazırlanması zamanı ortaq dil olaraq ingilis dili qəbul edilmiş və həmin dildə hazırlanmışdır.*

## Giriş

Elektron Əmtəə-Nəqliyyat Qaiməsi üçün API sənədlərinə xoş gəlmisiniz. API, Elektron Əmtəə-Nəqliyyat Qaimələri və Yol vərəqələrinin siyahılarını əldə etmək, yenilərini yaratmaq, mövcud olanları yeniləmək və onların vəziyyətini yoxlamaq üçün son nöqtələr təqdim edir.

Bütün sorğular başlıqda X-Requested-With parametrini tələb edir.

## API Son Nöqtələrinə Giriş

Son nöqtələrə giriş əldə etmək üçün əsas istifadəçi hesabının profil səhifəsində giriş nişanı yaratmalısınız. Bu giriş nişanı sorğu başlıqlarında icazə verici nişan kimi daxil edilməlidir.

## Mühitlər

Production Mühiti

Production mühiti üçün aşağıdakı əsas URL-dən istifadə edin:

Əsas URL: <https://e-enq.ayna.gov.az/api/>

## Şirkətləri əldə edin

Metod sistemdə qeydiyyatdan keçmiş şirkətlərin və fiziki şəxslərin siyahısını qaytarır.

**Endpoint:** `/partner_list`

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Parameter	Type	Description
name	<code>varchar(250)</code>	Name of the company, searching by include
email	<code>varchar(250)</code>	Email of company
fiscal_id	<code>varchar(50)</code>	TIN of company
partner_type	<code>integer</code>	Company type: 0 - all, 1 - legal entity, 2 - individual

Notes: for the endpoint it's required to use one of the filter parameters, i.e. name, email, fiscal\_id or id\_card.

Response:

The response returns array of companies or individuals registered in the system , filtered by parameter values

Parameter	Type	Description
id	<code>integer</code>	Unique identifier of the company
name	<code>varchar(250)</code>	Name of company
chief_id	<code>integer</code>	Unique identifier of main company employee
address	<code>varchar(1024)</code>	Address of company
email	<code>varchar(250)</code>	Email of company
fiscal_id	<code>varchar(50)</code>	TIN of company
id_card	<code>varchar(50)</code>	ID card of owner of company
partner_type	<code>integer</code>	Company type: 1 - legal entity 2 - individual
status	<code>varchar(50)</code>	Parameter is returning only in case of error
message	<code>varchar(1024)</code>	In case of status error, detailed information about cause of the error

Example request:

```
POST /partner_list
Content-Type: application/json
```

```
{  
  "fiscal_id": "1234567890"  
}
```

Example response #1:

```
HTTP/1.1 200 OK  
Content-Type: application/json  
[  
  {  
    "id": 953,  
    "name": "John Smith INC",  
    "chief_id": 28,  
    "address": "Baku plaza",  
    "email": "john.smith@doe.com",  
    "fiscal_id": "1234567890",  
    "partner_type": 1  
  }  
]
```

# Qaimə növlərini əldə et

Metod Elektron Əmtəə-Nəqliyyat Qaiməsinin qaimə növlərinin siyahısını qaytarır.

**Endpoint:** `/doc_types`

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Method does not use Request parameters

Response:

The response returns a list of waybill types

Parameter	Type	Description
<code>id</code>	<code>integer</code>	Unique identifier of the waybill type
<code>name</code>	<code>varchar(250)</code>	Name of waybill type
<code>attr</code>	<code>integer</code>	Waybill type attribute: 0 - default 1 - consignee omitted
<code>series</code>	<code>varchar(10)</code>	Default waybill series

Example request:

```
POST /doc_types
Content-Type: application/json
```

Example response:

```
HTTP/1.1 200 OK
Content-Type: application/json
[
  {
    "id": 1,

]

```

# İşçiləri əldə et

Metod işçilərin siyahısını qaytarır.

**Endpoint:** /employees

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters (optional):

Parameter	Type	Description
id	integer	Unique identifier of employee
name	varchar(250)	Name of employee
id_card	varchar(50)	ID card of employee

Response:

The response returns a list of employees

Parameter	Type	Description
id	integer	Unique identifier of employee
first_name	varchar(100)	First name of employee
last_name	varchar(100)	Last name of employee
post_id	integer	Employee's position identifier
id_card	varchar(50)	ID card of employee
passport	varchar(50)	Passport number
phone	varchar(50)	Phone number
email	varchar(250)	Email
birthday	varchar(10)	Birthday , format YYYY-MM-DD
id_user	varchar(10)	User ID , uses as code for Asan signature
date_in	varchar(10)	Date of hire , format YYYY-MM-DD
date_out	varchar(10)	Date of release, format YYYY-MM-DD
email_confirmed	boolean	Email confirmation attribute
phone_confirmed	boolean	Phone confirmation attribute
name	varchar(250)	Name of employee (concatenation of first_name and last name)
post_name	varchar(100)	Employee's position name

Example request:

```
POST /employees/  
Content-Type: application/json
```

Example response:

```
HTTP/1.1 200 OK
Content-Type: application/json
{
  "total": 2,
  "items": [
    {
      "id": 303,

    }
  ]
}
```

## Nəqliyyat vasitələrini əldə et

Metod nəqliyyat vasitələrinin siyahısını qaytarır.

**Endpoint:** /cars/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters (optional):

Parameter	Type	Description
car_num	<i>varchar(50)</i>	State number of vehicle
is_trailer	<i>boolean</i>	Vehicle trailer attribute, possible values false – is not a trailer true – is a trailer

Response:

The response returns a list of vehicles

Parameter	Type	Description
id	<i>integer</i>	Unique identifier of vehicle
car_num	<i>varchar(50)</i>	State number of vehicle
carrying	<i>float</i>	Maximum permitted weight
trailer	<i>integer</i>	Vehicle type , possible values: 1 – truck 2 – trailer 3 – semitrailer 4 – tractor
car_model_id	<i>integer</i>	Unique identifier of vehicle model
maker	<i>varchar(250)</i>	Maker name
model	<i>varchar(250)</i>	Model name

Example request:

```
POST /cars/  
Content-Type: application/json
```

Example response:

```
HTTP/1.1 200 OK  
Content-Type: application/json  
{  
  "total": 3,  
  "items": [  
    {
```

```
[{"id": 175, "car_num": "00UA0123", "carrying": 27.0, "trailer": 3, "car_model_id": 747, "maker": "Datsun", "model": "Sunny"}, {"id": 163, "car_num": "01CH401", "carrying": 6.4, "trailer": 1, "car_model_id": 1, "maker": "AC", "model": "378 GT Zagato"}, {"id": 311, "car_num": "02H3C4RQ", "carrying": 29.0, "trailer": 1, "car_model_id": 293, "maker": "Brabus", "model": "ML 63 Biturbo"}]
```

# Nəqliyyat vasitəsi əlavə et və ya yenilə

Metod yeni nəqliyyat vasitəsi əlavə etməyə və ya mövcud olanı yeniləməyə imkan verir.

**Endpoint:** /save\_car/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Parameter	Type	Description
id	integer	Unique identifier of vehicle, 0 – creating a new >0 – updating existing
car_num	varchar(50)	State number of vehicle
carrying	float	Maximum permitted weight
trailer	integer	Vehicle type, possible values: 1 – truck 2 – trailer 3 – semitrailer 4 – tractor
car_model_id	integer	Unique identifier of vehicle model

Response :

Parameter	Type	Description
status	varchar(50)	Status of request, possible values error – in case of error
message	varchar(1024)	Detailed information about result
id	integer	Unique identifier of vehicle
car_num	varchar(50)	State number of vehicle
carrying	float	Maximum permitted weight
trailer	integer	Vehicle type, possible values: 1 – truck 2 – trailer 3 – semitrailer 4 – tractor
car_model_id	integer	Unique identifier of vehicle model

Example request:

```
POST /save_car/  
Content-Type: application/json  
{  
    "car_num": "BH4444AC",  
    "carrying": 35  
}
```

Example response:

```
HTTP/1.1 200 OK
Content-Type: application/json

{
  "id": 319,
  "car_num": "BH4444AC",
  "car_model_id": null,
  "carrying": 35,
  "trailer": 0
}
```

## Qaimələrin siyahısını əldə et

Bu metod qaimələrin siyahısını əldə etməyə imkan verir.

**Endpoint:** `/doc_list/`

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Parameter	Type	Description
type_doc	<i>integer</i>	Waybill document type, possible values: 1 - at work, 2 - draft, 3 - deleted, 4 - canceled, 5 - rejected, 6 - completed
date_from	<i>varchar(50)</i>	Starting date, format "yyyy-mm-ddThh:mm:ss.sss"
date_for	<i>varchar(50)</i>	Ending date, format "yyyy-mm-ddThh:mm:ss.sss"
num	<i>varchar(50)</i>	Document number, searching by entry
route_list_num	<i>varchar(50)</i>	Number of route list document, searching by entry
route_list_id	<i>integer</i>	Route list identifier
type_partner	<i>integer</i>	Counterparty type, possible values: 1 - shipper, 2 - carrier, 3 - consignee
name	<i>varchar(250)</i>	Name or TIN of counterparty type, parameter requires set value of type_partner, searching by entry
email	<i>varchar(250)</i>	Email of counterparty type, requires set of value for type_partner parameter
status	<i>integer</i>	Document status, possible values: 1 - not signed 2 - waiting for own signature 3 - waiting for counterparties signature 4 - signed by all 5 - signature rejected 6 - on the way 7 - delivered 8 - refused to accept 9 - accepted by driver 10 - delivered, not confirmed

<code>page_index</code>	<code>integer</code>	Page number
<code>page_size</code>	<code>integer</code>	Quantity of documents per page
<code>sort_field</code>	<code>varchar(50)</code>	Name of field for sorting
<code>sort_direction</code>	<code>varchar(5)</code>	Sorting direction, possible values: asc – ascending desc – descending

Response:

The response returns total count of the waybill documents with details about each one

Parameter	Type	Description
<code>status</code>	<code>varchar(50)</code>	Parameter is returning only in case of error
<code>message</code>	<code>varchar(1024)</code>	In case of status error, detailed information about cause of the error
<code>total</code>	<code>integer</code>	Quantity of the documents
<code>items</code>	<i>array of objects</i>	In case of total > 0 array will contain the information about documents
<b>Document object parameters description</b>		
<code>id</code>	<code>integer</code>	Unique identifier of the document
<code>num</code>	<code>varchar(50)</code>	Waybill document number
<code>dat</code>	<code>varchar(50)</code>	Date of the document, format "yyyy-mm-ddThh:mm:ss.sss"
<code>upd_time</code>	<code>varchar(50)</code>	Last modification date, format "yyyy-mm-ddThh:mm:ss.sss"
<code>notes</code>	<code>varchar(250)</code>	Notes
<code>arrival_not_confirmed</code>	<code>varchar(50)</code>	Date and time of not confirmed arrival, format "yyyy-mm-ddThh:mm:ss.sss"
<code>arrival</code>	<code>varchar(50)</code>	Date and time of arrival confirmation, format "yyyy-mm-ddThh:mm:ss.sss"
<code>departure</code>	<code>varchar(50)</code>	Date and time of departure, format "yyyy-mm-ddThh:mm:ss.sss"
<code>delivery_duration</code>	<code>float</code>	Delivery duration calculated by navigation system, in minutes
<code>distance</code>	<code>float</code>	Distance between map points in meters
<code>route_list_id</code>	<code>integer</code>	Identifier of route list
<code>route_list_num</code>	<code>varchar(50)</code>	Number of route list
<code>src_address</code>	<code>varchar(1024)</code>	Source address
<code>dst_address</code>	<code>varchar(1024)</code>	Destination address
<code>estimated_delivery_duration</code>	<code>float</code>	Estimated delivery duration in minutes
<code>shipper_id</code>	<code>integer</code>	Identifier of shipper
<code>consignee_id</code>	<code>integer</code>	Identifier of consignee
<code>carrier_id</code>	<code>integer</code>	Identifier of carrier
<code>is_del</code>	<code>integer</code>	Document deletion attribute, possible values: 0 - Normal, 1 - Deleted

reject	<i>integer</i>	Document signature rejected attribute, possible values: 0 - Normal, 1 - Rejected	
draft	<i>integer</i>	Document draft state attribute, possible values: 0 - Normal, 1 - Draft	
is_dangerous	<i>boolean</i>	Document attribute which determines that cargo is dangerous, possible values: false - Normal, true - Cargo is dangerous	
is_heavyweight	<i>boolean</i>	Document attribute which determines that cargo is overweighted, possible values: false - Normal, true - Cargo is overweighted	
is_oversized	<i>boolean</i>	Document attribute which determines that cargo is oversized, possible values: false - Normal, true - Cargo is oversized	
is_reloading_prohibited	<i>boolean</i>	Document attribute which determines that cargo can be reloaded to another vehicle, possible values: false - Can be reloaded, true - Reloading is prohibited	
weight	<i>float</i>	Weight of cargo	
dst_latitude,	<i>float</i>	Latitude of destination address	
dst_longitude	<i>float</i>	Longitude of destination address	
src_latitude	<i>float</i>	Latitude of source address	
src_longitude	<i>float</i>	Longitude of source address	
shipper	<i>object</i>	Shipper information	
Shipper object parameters	id	<i>integer</i>	Identifier
	name	<i>varchar(250)</i>	Name
	email	<i>varchar(250)</i>	Email
	tin	<i>varchar(250)</i>	Tax identification number
carrier	<i>object</i>	Carrier information	
Carrier object parameters	id	<i>integer</i>	Identifier
	name	<i>varchar(250)</i>	Name
	email	<i>varchar(250)</i>	Email
	tin	<i>varchar(250)</i>	Tax identification number
consignee	<i>object</i>	Consignee information	
Consignee object parameters	id	<i>integer</i>	Identifier
	name	<i>varchar(250)</i>	Name
	email	<i>varchar(250)</i>	Email
	tin	<i>varchar(250)</i>	Tax identification number
status	<i>integer</i>	Document status, possible values: 1 - not signed 2 - waiting for own signature 3 - waiting for counterparties signature 4 - signed by all 5 - signature rejected	

		6 - on the way 7 - delivered 8 - refused to accept 9 - accepted by driver 10 - delivered, not confirmed	
forwarder_name	varchar(250)	Name of forwarder	
forwarder_id_card	varchar(50)	ID card of forwarder	
route_list_position -	integer	Position of this document in route list	
driver	Object	Information about the driver	
Driver	id	Integer	Identifier of driver
object	id_card	varchar(50)	ID card of driver
parameters	name	varchar(250)	Name of driver
car_num	varchar(50)	Vehicle state number	
trailer_num	varchar(50)	Trailer state number	
car_id	integer	Vehicle identifier	
trailer_id	integer	Trailer identifier	

Example request:

```

# Qaimə təfərrüatlarını əldə et

Bu metod qaimələrin təfərrüatlarını əldə etməyə imkan verir.

**Endpoint:** /doc\_card/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters (required):

Parameter	Type	Description
id	integer	Document identifier

Response:

The response returns waybill details in case of document id is existing in the system

Parameter	Type	Description
status	varchar(50)	Parameter is returning only in case of error
message	varchar(1024)	In case of status error, detailed information about cause of the error
id	integer	Document identifier
num	varchar(50)	Document number
doc_type_id	integer	Document type identifier (see doc_types endpoint)
doc_type_attr	integer	Document type attribute, possible values: 0 – regular document 1 – document without consignee
doc_type_name	varchar(250)	Document type name
dat	varchar(50)	Date of the document, format "yyyy-mm-ddThh:mm:ss.sss",
payer	integer	Payer attribute, possible values: 1 - Shipper, 2 - Consignee
created_by_obj_id	integer	Identifier of the organisation which create the document
tax_invoice_num	varchar(50)	Document invoice number
upd_time	varchar(50)	Last modification date, format "yyyy-mm-ddThh:mm:ss.sss",
distance	float	Distance between map points, in kilomiters
route_list_position	integer	Position of this document in route list
arrival	varchar(50)	Date and time of arrival confirmation, format "yyyy-mm-ddThh:mm:ss.sss"
departure	varchar(50)	Date and time of departure, format "yyyy-mm-ddThh:mm:ss.sss"

<code>dst_latitude</code>	<code>float</code>	Latitude of destination address
<code>dst_longitude</code>	<code>float</code>	Longitude of destination address
<code>src_latitude</code>	<code>float</code>	Latitude of source address
<code>src_longitude</code>	<code>float</code>	Longitude of source address
<code>current_latitude</code>	<code>float</code>	Current latitude value
<code>current_longitude</code>	<code>float</code>	Current longitude value
<code>notes</code>	<code>varchar(250)</code>	Document notes
<code>shipper_id</code>	<code>integer</code>	Identifier of shipper
<code>consignee_id</code>	<code>integer</code>	Identifier of consignee
<code>carrier_id</code>	<code>integer</code>	Identifier of carrier
<code>ready_to_departure</code>	<code>varchar(50)</code>	Date and time when cargo is ready to dispatch, format "yyyy-mm-ddThh:mm:ss.sss"
<code>arrival_not_confirmed</code>	<code>varchar(50)</code>	Date and time of cargo arrival, format "yyyy-mm-ddThh:mm:ss.sss"
<code>insurance_notes</code>	<code>varchar(1024)</code>	Insurance information
<code>acceptance_notes</code>	<code>varchar(1024)</code>	Acceptance information
<code>dangerous_notes</code>	<code>varchar(1024)</code>	Notes for dangerous cargo
<code>src_address_notes</code>	<code>varchar(1024)</code>	Notes for departure address
<code>dst_address_notes</code>	<code>varchar(1024)</code>	Notes for delivery address
<code>extra_cost</code>	<code>float</code>	Additional expenses,
<code>final_pay</code>	<code>float</code>	Final payment amount
<code>prepayment</code>	<code>float</code>	Advance payment amount
<code>amount</code>	<code>float</code>	Total document amount
<code>weight</code>	<code>float</code>	Total weight of cargo in document
<code>transp_cost</code>	<code>float</code>	Cost of transportation
<code>extra_cost_notes</code>	<code>varchar(1024)</code>	Additional expenses justification
<code>final_pay_at</code>	<code>varchar(50)</code>	Date and time of final payment, format "yyyy-mm-ddThh:mm:ss.sss"
<code>prepaid_at</code>	<code>varchar(50)</code>	Date and time of advance payment, format "yyyy-mm-ddThh:mm:ss.sss"
<code>estimated_arrival</code>	<code>varchar(50)</code>	Date and time of estimated arrival, format "yyyy-mm-ddThh:mm:ss.sss"
<code>estimated_delivery_duration</code>	<code>float</code>	Estimated delivery duration, in minutes
<code>self_delivery</code>	<code>boolean</code>	Document attribute determines that cargo is delivering by one of the counterparties
<code>is_del</code>	<code>integer</code>	Document deletion attribute, possible values: 0 - Normal, 1 - Deleted
<code>reject</code>	<code>integer</code>	Document signature rejected attribute, possible values: 0 - Normal, 1 - Rejected
<code>draft</code>	<code>integer</code>	Document draft state attribute, possible values: 0 - Normal, 1 - Draft

is_dangerous	<i>integer</i>	Document attribute which determines that cargo is dangerous, possible values: false - Normal, true - Cargo is dangerous
is_heavyweight	<i>boolean</i>	Document attribute which determines that cargo is overweighted, possible values: false - Normal, true - Cargo is overweighted
is_oversized	<i>boolean</i>	Document attribute which determines that cargo is oversized, possible values: false - Normal, true - Cargo is oversized
is_reloading_prohibited	<i>boolean</i>	Document attribute which determines that cargo can be reloaded to another vehicle, possible values: false - Can be reloaded true - Reloading is prohibited
shipper_email	<i>varchar(250)</i>	Email of shipper
carrier_email	<i>varchar(250)</i>	Email of carrier
consignee_email	<i>varchar(250)</i>	Email of consignee
src_address	<i>varchar(1024)</i>	Source address
shipper_sign	<i>varchar(250)</i>	Document signature of shipper
carrier_sign	<i>varchar(250)</i>	Document signature of carrier
consignee_sign	<i>varchar(250)</i>	Document signature of consignee
rejected_at	<i>varchar(50)</i>	Date and time when document was rejected, format "yyyy-mm-ddThh:mm:ss.sss"
shipper_signed_at	<i>varchar(50)</i>	Date and time when document was signed by shipper, format "yyyy-mm-ddThh:mm:ss.sss"
carrier_signed_at	<i>varchar(50)</i>	Date and time when document was signed by carrier, format "yyyy-mm-ddThh:mm:ss.sss"
consignee_signed_at	<i>varchar(50)</i>	Date and time when document was signed by consignee, format "yyyy-mm-ddThh:mm:ss.sss"
lic_num	<i>varchar(50)</i>	Transportation licence number
lic_exp_date	<i>varchar(50)</i>	Licence expiration date, format "yyyy-mm-dd",
lic_type	<i>integer</i>	Type of licence
lic_type_name	<i>varchar(50)</i>	Licence type name
rejected_by_obj_id	<i>integer</i>	Counterparty identifier which reject document signing
dst_address	<i>varchar(1024)</i>	Destination address
shipper_name	<i>varchar(250)</i>	Shipper name
shipper_tin	<i>varchar(50)</i>	Shipper tax identification number
carrier_name	<i>varchar(250)</i>	Carrier name

carrier_tin	<i>varchar(50)</i>	-Carrier tax identification number
consignee_name	<i>varchar(250)</i>	- Consignee name
consignee_tin	<i>varchar(250)</i>	- Consignee tax identification number
shipper_bank_details	<i>text</i>	- Bank details of shipper
carrier_bank_details	<i>text</i>	- Bank details of carrier
consignee_bank_details	<i>text</i>	Bank details of consignee
vat_prc	<i>float</i>	- Percent of VAT
vat_additional	<i>boolean</i>	VAT additional attribute, possible values: true - VAT additional to Extra costs false - VAT included in Extra costs
extra_cost_vat	<i>float</i>	VAT for extra_cost,
paid_vat	<i>float</i>	Paid VAT amount,
vat_paid_at	<i>varchar(50)</i>	Date and time of VAT payment, format "yyyy-mm-ddThh:mm:ss.sss",
vat_to_pay	<i>float</i>	Amount of VAT to pay
prepayment_vat	<i>float</i>	Amount of VAT for advance payment amount
final_pay_vat	<i>float</i>	Amount of VAT for final payment amount
shipper_is_legal	<i>boolean</i>	Shipper type attribute, possible values: true – legal false – individual
consignee_is_legal	<i>boolean</i>	Consignee type attribute, possible values: true - legal false – individual
carrier_is_legal	<i>boolean</i>	Shipper type attribute, possible values: true - legal false – individual
status	<i>integer</i>	Document status, possible values: 1 - not signed, 2 - waiting for own signature, 3 - waiting for counterparties signature, 4 - signed by all, 5 - signature rejected, 6 - on the way, 7 - delivered, 8 - refused to accept, 9 - accepted by driver, 10 - delivered, not confirmed
shipper_employee_name	<i>varchar(250)</i>	Name of shipper's employee who sign the document
shipper_employee_id_card	<i>varchar(250)</i>	ID card of shipper's employee who sign the document
carrier_employee_name	<i>varchar(250)</i>	Name of carrier's employee who sign the document
carrier_employee_id_card	<i>varchar(250)</i>	ID card of carrier's employee who sign the document

consignee_employee_name	<i>varchar(250)</i>	Name of consignee's employee who sign the document	
consignee_employee_id_card	<i>varchar(250)</i>	ID card of consignee's employee who sign the document	
car_num	<i>varchar(50)</i>	Vehicle state number <i>varchar(50)</i> ,	
car_model	<i>varchar(250)</i>	Vehicle model name	
car_carrying	<i>float</i>	Vehicle load capacity	
trailer_num	<i>varchar(50)</i>	Trailer state number	
trailer_model	<i>varchar(250)</i>	Trailer model name	
trailer_carrying	<i>float</i>	Trailer load capacity	
driver_id	<i>integer</i>	Identifier of driver	
driver_name	<i>varchar(250)</i>	Driver name,	
driver_id_card	<i>varchar(50)</i>	ID card of driver	
forwarder_name	<i>varchar(250)</i>	Forwarder name	
forwarder_id_card -	<i>varchar(50)</i>	ID card of forwarder	
items	<i>array of objects</i>	List of products	
Product object parameters	<i>id</i>	<i>integer</i>	Record identifier
	<i>grp_id</i>	<i>integer</i>	Product group identifier
	<i>unit_id</i>	<i>integer</i>	Unit of measure identifier
	<i>item_name</i>	<i>varchar(1024)</i>	Product name
	<i>item_code</i>	<i>varchar(250)</i>	Product code
	<i>cnt</i>	<i>float</i>	Product quantity
	<i>received_cnt</i>	<i>float</i>	Product shipped quantity
	<i>weight</i>	<i>float</i>	Product weight
	<i>amount</i>	<i>float</i>	Product cost
	<i>places</i>	<i>integer</i>	Number of places
	<i>place_num</i>	<i>varchar(50)</i>	Place name
	<i>grp_name</i>	<i>text</i>	Product HS code description
	<i>unit_name</i>	<i>varchar(250)</i>	Unit of measure name
	<i>grp_code</i>	<i>varchar(50)</i>	HS code

# Qaimə yarat və ya yenilə

Metod yeni qaimə əlavə etməyə və ya mövcud olanı yeniləməyə imkan verir.

**Endpoint:** /save\_hd\_doc/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Parameter	Type	Description
id	integer	Document identifier 0 – creating a new waybill >0 – updating existing waybill
doc_type_id	integer	Document type identifier (see doc_types endpoint)
payer	integer	Payer attribute, possible values: 1 - Shipper, 2 - Consignee
dst_latitude	float	Latitude of destination address
dst_longitude	float	Longitude of destination address
src_latitude	float	Latitude of source address
src_longitude	float	Longitude of source address
current_latitude	float	Current latitude value
current_longitude	float	Current longitude value
notes	varchar(250)	Document notes
shipper_id	integer	Identifier of shipper
consignee_id	integer	Identifier of consignee
carrier_id	integer	Identifier of carrier
insurance_notes	varchar(1024)	Insurance information
acceptance_notes	varchar(1024)	Acceptance information
dangerous_notes	varchar(1024)	Notes for dangerous cargo
src_address_notes	varchar(1024)	Notes for departure address
dst_address_notes	varchar(1024)	Notes for delivery address
extra_cost	float	Additional expenses,
final_pay	float	Final payment amount
prepayment	float	Advance payment amount
transp_cost	float	Cost of transportation
extra_cost_notes	varchar(1024)	Additional expenses justification
estimated_delivery_duration	float	Estimated delivery duration, in minutes
self_delivery	boolean	Document attribute determines that cargo is delivering by one of the counterparties
is_dangerous	integer	Document attribute which determines that cargo is dangerous, possible values: false - Normal, true - Cargo is dangerous

is_heavyweight	<i>boolean</i>	Document attribute which determines that cargo is overweighted, possible values: false - Normal, true - Cargo is overweighted
is_oversized	<i>boolean</i>	Document attribute which determines that cargo is oversized, possible values: false - Normal, true - Cargo is oversized
is_reloading_prohibited	<i>boolean</i>	Document attribute which determines that cargo can be reloaded to another vehicle, possible values: false - Can be reloaded true - Reloading is prohibited
shipper_email	<i>varchar(250)</i>	Email of shipper
carrier_email	<i>varchar(250)</i>	Email of carrier
consignee_email	<i>varchar(250)</i>	Email of consignee
src_address	<i>varchar(1024)</i>	Source address
shipper_sign	<i>varchar(250)</i>	Document signature of shipper
lic_num	<i>varchar(50)</i>	Transportation licence number
lic_exp_date	<i>varchar(50)</i>	Licence expiration date, format "yyyy-mm-dd",
lic_type	<i>integer</i>	Type of licence
lic_type_name	<i>varchar(50)</i>	Licence type name
dst_address	<i>varchar(1024)</i>	Destination address
shipper_name	<i>varchar(250)</i>	Shipper name
shipper_tin	<i>varchar(50)</i>	Shipper tax identification number
carrier_name	<i>varchar(250)</i>	Carrier name
carrier_tin	<i>varchar(50)</i>	-Carrier tax identification number
consignee_name	<i>varchar(250)</i>	- Consignee name
consignee_tin	<i>varchar(250)</i>	- Consignee tax identification number
vat_prc	<i>float</i>	- Percent of VAT
vat_additional	<i>boolean</i>	VAT additional attribute, possible values: true - VAT additional to Extra costs false - VAT included in Extra costs
extra_cost_vat	<i>float</i>	VAT for extra_cost,
car_id	<i>varchar(50)</i>	Vehicle state number <i>varchar(50)</i> ,
trailer_id	<i>varchar(50)</i>	Trailer state number
driver_id	<i>integer</i>	Identifier of driver
forwarder_name	<i>varchar(250)</i>	Forwarder name
forwarder_id_card -	<i>varchar(50)</i>	ID card of forwarder

Response:

The response returns document parameters the same as for endpoint */doc\_card/*

Example request:

```
POST /save_hd_doc/
Content-Type: application/json
{
    "id": 0,
    "shipper_id": 20,
    "carrier_id": 20,
    "consignee_id": 20,
    "doc_type_id": 2
}
```

Example response:

```
HTTP/1.1 200 OK
Content-Type: application/json

## Qaiməni sil

Metod mövcud qaiməni silməyə imkan verir.

**Endpoint:** /del\_hd\_doc/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Parameter	Type	Description
id	integer	Document identifier

Response:

Parameter	Type	Description
status	varchar(50)	Status of request, possible values success – in case of successful deleting error – in case of error
message	varchar(1024)	Detailed information about result

Example request:

```
POST / del_hd_doc/  
Content-Type: application/json  
{  
    "id": 4555  
}
```

Example response:

```
HTTP/1.1 200 OK  
Content-Type: application/json  
  
{  
    "status": "error",  
    "message": "Can't delete signed document"  
}
```

# Ölçü vahidlərini əldə et

Metod ölçü vahidlərinin siyahısını qaytarır.

**Endpoint:** /units/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters (optional):

Parameter	Type	Description
name	varchar(250)	Name of unit

Response:

The response returns a list of units

Parameter	Type	Description
id	integer	Unique identifier of unit
name	varchar(250)	Name of unit

Example request:

```
POST /units/
Content-Type: application/json
{
  "name": "la"
}
```

Example response:

```
HTTP/1.1 200 OK
Content-Type: application/json
{
  "total": 3,
  "items": [
    {
      "id": 75,
      "name": "Ampula"
    },
    {
      "id": 66,
      "name": "Bağlama"
    },
    {
      "id": 76,
      "name": "Flakon"
    }
  ]
}
```

## HS kodlarını əldə et

Metod mövcud HS kodlarının siyahısını qaytarır.

**Endpoint:** /groups/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Parameter	Type	Description
code	varchar(250)	HS code value
name	varchar(250)	HS code description

Response:

The response returns a list of HS codes

Parameter	Type	Description
id	integer	Unique identifier
code	varchar(250)	HS code value
name	text	HS code description

Example request:

```
POST /groups/
Content-Type: application/json
{
  "code": "0207144000"
}
```

Example response:

```
HTTP/1.1 200 OK
Content-Type: application/json
{
  "total": 1,
  "items": [
    {
      "id": 15255,
      "code": "0207144000",
      "name": "0105 mal mövqeyində göstərilən ev quşlarının əti və ət əlavələri, təzə, soyudulmuş və ya
dondurulmuş:— ev toyuqlarının (Gallus domesticus):— cəmdək hissələri və ət əlavələri, dondurulmuş:—
cəmdək hissələri:— — — sümükdən ayrılmamışlar:— — — belləri, boyunları, belləri boynu ilə birgə,
büzdümləri və qanadların nazik ucları"
    }
  ]
}
```

## Qaimə qeydləri əlavə et və ya yenilə

Metod qaiməyə yeni bir qeyd əlavə etməyə və ya mövcud olanı yeniləməyə imkan verir.

**Endpoint:** /save\_rc\_doc /

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Parameter	Type	Description
id	integer	Record identifier 0 – creating a new record >0 – updating existing record
doc_id	integer	Document type identifier (see doc_types endpoint)
grp_id	integer	Product group identifier
unit_id	integer	Unit of measure identifier
item_name	varchar(1024)	Product name
item_code	varchar(250)	Product code
cnt	float	Product quantity
weight	float	Product weight
amount	float	Product cost
places	integer	Number of places
place_num	varchar(50)	Place name
grp_name	text	Product HS code description
unit_name	varchar(250)	Unit of measure name
grp_code	varchar(50)	HS code

Response:

Parameter	Type	Description
id	integer	Record identifier
doc_id	integer	Document type identifier (see doc_types endpoint)
grp_id	integer	Product group identifier
unit_id	integer	Unit of measure identifier
item_name	varchar(1024)	Product name
item_code	varchar(250)	Product code
cnt	float	Product quantity
weight	float	Product weight
amount	float	Product cost
places	integer	Number of places
place_num	varchar(50)	Place name
grp_name	text	Product HS code description
unit_name	varchar(250)	Unit of measure name

grp_code	varchar(50)	HS code
----------	-------------	---------

Example request:

```
POST /save_rc_doc/
Content-Type: application/json
{
    "doc_id": 3768,
    "grp_id": 15255,
    "item_code": "1234",
    "item_name": "test_assort",
    "unit_id": 75,
    "cnt": 6,
    "weight": 7000,
    "place_num": "2A",
    "places": 5,
    "amount": 121.2
}
```

Example response:

```
HTTP/1.1 200 OK
Content-Type: application/json

{
    "id": 1352,
    "parent_rec_id": null,
    "grp_id": 15255,
    "item_name": "test_assort",
    "item_code": "1234",
    "unit_id": 75,
    "cnt": 6,
    "price": 20.2,
    "amount": 121.2,
    "weight": 7000,
    "places": 5,
    "place_num": "2A",
    "qr_code": null,
    "doc_id": 3768,
    "received_cnt": 0,
    "import_series": null,
    "import_doc_type": null,
    "import_num": null,
    "grp_name": "0105 mal mövqeyində göstərilən ev quşlarının əti və ət əlavələri, təzə, soyudulmuş və ya dondurulmuş:— ev toyuqlarının (Gallus domesticus):— cəmdək hissələri və ət əlavələri, dondurulmuş:— cəmdək hissələri:— — — sümükdən ayrılmamışlar:— — — belləri, boyunları, belləri boynu ilə birgə, büzdümləri və qanadların nazik ucları",

```
HTTP/1.1 200 OK  
Content-Type: application/json  
  
{  
    "status": "success"  
}
```

# Qaimə üçün imzalama sorğusu göndər

Metod qaimənin imzalanmasını başlatmağa imkan verir.

**Endpoint:** /sign\_doc/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Parameter	Type	Description
id	integer	Document identifier
sign_type	varchar(10)	Sign type , possible values: imza – Asan sign sima – Sima sign
upd_time	varchar(20)	Current timestamp , format yyyy-MM-ddhh:mm:ss.fff

Response:

Parameter	Type	Description
status	varchar(50)	Status of request, possible values success – in case of successful request error – in case of error
message	varchar(1024)	Detailed information about result
code	text	In case of sima – qr code in base64 imza – code of signature request
sign_status	varchar(20)	Signing status

Example request:

```
POST /sign_doc/
Content-Type: application/json
{
  "id": 4578,
  "upd_time": "2024-03-31T15:55:41.425",
  "sign_type": "sima"
}
```

Example response:

```
HTTP/1.1 200 OK
Content-Type: application/json
{
```

```

    "status": "success",
    "code": "data:image/png;base64,

# Qaimənin imzalanma prosesinin vəziyyətini yoxla

Metod qaimənin imzalanma prosesinin vəziyyətini yoxlamağa imkan verir.

**Endpoint:** /check\_sign\_doc/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Parameter	Type	Description
id	<i>integer</i>	Document identifier
sign_type	<i>varchar(10)</i>	Sign type , possible values: imza – Asan sign sima – Sima sign

Response:

Parameter	Type	Description
status	<i>varchar(50)</i>	Status of request, possible values success – in case of successful request error – in case of error
message	<i>varchar(1024)</i>	Detailed information about result
sign_status	<i>varchar(20)</i>	Signing status

Example request:

```
POST /check_sign_doc/  
Content-Type: application/json  
{  
    "id": 3761,  
    "sign_type": "imza"  
}
```

Example response:

```
HTTP/1.1 200 OK  
Content-Type: application/json  
{  
    "status": "success",  
    "sign_status": "error",  
    "message": "SIM application error"  
}
```

## Qaimənin imzasını rədd et

Metod imzalanmamış qaiməni rədd etməyə imkan verir, bu əməliyyat qaiməyə rədd edilmiş atributunu təyin edir. Bu əməliyyat geri qaytarıla bilməz.

**Endpoint:** /reject\_doc/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Parameter	Type	Description
id	integer	Document identifier

Response:

Parameter	Type	Description
status	varchar(50)	Status of request, possible values success – in case of successful request error – in case of error
message	varchar(1024)	Detailed information about result

Example request:

```
POST /reject_doc/  
Content-Type: application/json  
{  
    "id": 3761  
}
```

Example response:

```
HTTP/1.1 200 OK  
Content-Type: application/json  
{  
    "status": "success"  
}
```

# İmzalanmış qaimə üçün ləğv sorğusu göndər

Metod imzalanmış və tamamlanmamış qaimələr üçün imzalama ləğv sorğusu göndərməyə imkan verir, bu əməliyyat qaiməyə ləğv edilmiş atributunu təyin edir. Bu əməliyyat geri qaytarıla bilməz.

**Endpoint:** /cancel\_doc/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Parameter	Type	Description
id	integer	Document identifier
sign_type	varchar(10)	Sign type , possible values: imza – Asan sign sima – Sima sign
cancel_notes	varchar(1024)	Cancelation notes

Response:

Parameter	Type	Description
status	varchar(50)	Status of request, possible values success – in case of successful request error – in case of error
message	varchar(1024)	Detailed information about result
code	text	In case of sima – qr code in base64 imza – code of signature request

Example request:

```
POST /cancel_doc/  
Content-Type: application/json  
{  
    "id": 90,  
    "cancel_notes": "sdfdsfsdfsdfsdf",  
    "sign_type": "sima"  
}
```

Example response:

```
HTTP/1.1 200 OK  
Content-Type: application/json  
{  
    "status": "success",  
    "code": "data:image/png;base64,  
iVBORw0KGgoAAAANSUhEUgAAAKYAAAJGAQAAAACWpnfBAAAJNUIEQVR4nO2cXa7rNgyECWgBXpK2riVIAQ
```

# Qaimənin ləğv imzalanma prosesinin vəziyyətini yoxla

Metod qaimənin ləğv imzalanma prosesinin vəziyyətini yoxlamağa imkan verir.

**Endpoint:** `/check_cancel_doc/`

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Parameter	Type	Description
<code>id</code>	<code>integer</code>	Document identifier
<code>sign_type</code>	<code>varchar(10)</code>	Sign type , possible values: imza – Asan sign sima – Sima sign

Response:

Parameter	Type	Description
<code>status</code>	<code>varchar(50)</code>	Status of request, possible values success – in case of successful request error – in case of error
<code>message</code>	<code>varchar(1024)</code>	Detailed information about result
<code>sign_status</code>	<code>varchar(20)</code>	Signing status

Example request:

```
POST /check_cancel_doc/  
Content-Type: application/json  
{  
    "id": 3761,  
    "sign_type": "imza"  
}
```

Example response:

```
HTTP/1.1 200 OK  
Content-Type: application/json  
{  
    "status": "success",  
    "sign_status": "error",  
    "message": "SIM application error"  
}
```

# Qaimə üçün qəbul/rədd imzalama sorğusu göndər

Metod təhlil verilmiş və təsdiqlənməmiş yük qaimələri üçün qəbul və ya imtina imza sorğusu göndərməyə imkan verir.

**Endpoint:** /sign\_accept\_doc/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Parameter	Type	Description
id	integer	Document identifier
sign_type	varchar(10)	Sign type , possible values: imza – Asan sign sima – Sima sign
reject	integer	Type of request, possible values: 0 – acceptance 1 – refusal
acceptance_notes	varchar(1024)	Acceptance/Refusal notes

Response:

Parameter	Type	Description
status	varchar(50)	Status of request, possible values success – in case of successful request error – in case of error
message	varchar(1024)	Detailed information about result
code	text	In case of sima – qr code in base64 imza – code of signature request

Example request:

```
POST /sign_accept_doc/  
Content-Type: application/json  
{  
    "id": 90,  
    "acceptance_notes": "all is good",  
    "sign_type": "sima"  
}
```

Example response:

```
HTTP/1.1 200 OK  
Content-Type: application/json
```

```

## Qəbul/rədd imzalanma prosesinin vəziyyətini yoxla

Metod qaimə sənədlərinin qəbulu və ya imtina imzalanmasının gedisatının vəziyyətini yoxlamağa imkan verir

**Endpoint:** /check\_sign\_accept\_doc/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Parameter	Type	Description
id	<i>integer</i>	Document identifier
sign_type	<i>varchar(10)</i>	Sign type , possible values: imza – Asan sign sima – Sima sign

Response:

Parameter	Type	Description
status	<i>varchar(50)</i>	Status of request, possible values success – in case of successful request error – in case of error
message	<i>varchar(1024)</i>	Detailed information about result
sign_status	<i>varchar(20)</i>	Signing status

Example request:

```
POST /check_sign_accept_doc/  
Content-Type: application/json  
{  
    "id": 3761,  
    "sign_type": "imza"  
}
```

Example response:

```
HTTP/1.1 200 OK  
Content-Type: application/json  
{  
    "status": "success",  
    "sign_status": "in progress",  
    "message": "Document is not signed yet"  
}
```

# Qaimə üçün qismən göndəriş

Metod daşıyıcıya qaimə sənədlərinin bir hissəsini göndərməyə imkan verir

**Endpoint:** /ship\_doc/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Parameter	Type	Description		
id	integer	Document identifier		
consignee_id	integer	Identifier of consignee		
items	array	Array of waybill item record objects		
Item record object	<td>id cnt</td> <td>integer float</td> <td>Indetifier of waybill record Shipping quantity</td>	id cnt	integer float	Indetifier of waybill record Shipping quantity

Response:

Parameter	Type	Description
status	varchar(50)	Status of request, possible values success – in case of successful request error – in case of error
message	varchar(1024)	Detailed information about result

Example request:

```
POST /ship_doc/  
Content-Type: application/json  
{  
    "id": 1704,  
    "consignee_id": 20,  
    "items": [  
        {  
            "id": 1196,  
            "cnt": 10  
        }  
    ]  
}
```

Example response:

```
HTTP/1.1 200 OK  
Content-Type: application/json  
{  
    "status": "success  
}
```

# Qaimənin PDF surətini əldə et

Metod yol sənədinin pdf nüsxəsini əldə etməyə imkan verir.

'X-LANG' dil parametri sorğunun başlığında göstərilə bilər. Mümkün dəyərlər:

- Az
- En

**Endpoint:** /waybill/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters (required):

Parameter	Type	Description
id	integer	Document identifier

Request parameters (optional):

Parameter	Type	Description
output	varchar(10)	Output format, default binary, possible values: <ul style="list-style-type: none"><li>• binary</li><li>• base64</li></ul>

Response:

The response returns waybill pdf copy

Parameter	Type	Description
status	varchar(50)	Parameter is returning only in case of error
message	varchar(1024)	In case of status error, detailed information about cause of the error
data	text	Base64 content in case of output format set to base64

Example request:

```
POST /waybill/  
Content-Type: application/json  
X-Requested-With: XMLHttpRequest  
X-COMPANY-ID: 1  
x-lang: en
```

```
{  
  "id": 555,  
  "output": "base64"  
}
```

Example response:

```
HTTP/1.1 200 OK  
Content-Type: application/json  
  
{  
  "data": "..."  
}
```

## Yol vərəqələrini əldə et

Bu üsul marşrut siyahılarını əldə etməyə imkan verir.

**Endpoint:** `/routes_lists/`

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters (optional):

Parameter	Type	Description
date_from	<code>varchar(50)</code>	Starting date, format "yyyy-mm-ddThh:mm:ss.sss"
date_for	<code>varchar(50)</code>	Ending date, format "yyyy-mm-ddThh:mm:ss.sss"
num	<code>varchar(50)</code>	Route list number, searching by entry
id	<code>integer</code>	Route list identifier
car_num	<code>varchar(50)</code>	Vehicle number, by entry
driver_name	<code>varchar(250)</code>	Driver name, by entry,
driver_id_card	<code>varchar(50)</code>	ID card of driver
status	<code>integer</code>	Route list status, possible values: 0 - Free, 1 - Waiting, 2 - In process, 3 - Completed
page_index	<code>integer</code>	Page number
page_size	<code>integer</code>	Quantity of documents per page
sort_field	<code>varchar(50)</code>	Name of field for sorting
sort_direction	<code>varchar(50)</code>	Sorting direction, possible values: asc – ascending desc – descending

Response:

The response returns total count of the route list documents with details about each one

Parameter	Type	Description
status	<code>varchar(50)</code>	Parameter is returning only in case of error
message	<code>varchar(1024)</code>	In case of status error, detailed information about cause of the error
total	<code>integer</code>	Quantity of the documents
items	<code>array of objects</code>	In case of total > 0 array will contain the information about documents
Route list object parameters description		

<i>id</i>	<i>integer</i>	Route list identifier	
<i>num</i>	<i>varchar(50)</i>	Number of route list	
<i>dat</i>	<i>varchar(50)</i>	Date of route list, format "yyyy-mm-ddThh:mm:ss.sss"	
<i>date_from</i>	<i>varchar(50)</i>	Starting date of route list, format "yyyy-mm-ddThh:mm:ss.sss"	
<i>date_for</i>	<i>varchar(50)</i>	Ending date of route list, format "yyyy-mm-ddThh:mm:ss.sss"	
<i>notes</i>	<i>varchar(1024)</i>	Route list notes	
<i>obj_id</i>	<i>Integer</i>	Carrier identifier	
<i>dst_latitude</i>	<i>float</i>	Latitude of destination address	
<i>dst_longitude</i>	<i>float</i>	Longitude of destination address	
<i>src_latitude</i>	<i>float</i>	Latitude of source address	
<i>src_longitude</i>	<i>float</i>	Longitude of source address	
<i>src_address</i>	<i>varchar(1024)</i>	Source address	
<i>dst_address</i>	<i>varchar(1024)</i>	Destination address	
<i>documents_count</i>	<i>integer</i>	Number of documents in route list	
<i>driver</i>	<i>object</i>	Information about driver	
Driver object parameters	<i>id</i>	<i>integer</i>	Identifier
	<i>id_card</i>	<i>varchar(50)</i>	ID card
	<i>name</i>	<i>varchar(250)</i>	Name
<i>dispatcher</i>	<i>object</i>	Information about dispatcher	
Dispatcher object parameters	<i>id</i>	<i>integer</i>	Identifier
	<i>id_card</i>	<i>varchar(50)</i>	ID card
	<i>name</i>	<i>varchar(250)</i>	Name
<i>fuel_auditor</i>	<i>object</i>	Information about fuel auditor	
Fuel auditor object parameters	<i>id</i>	<i>integer</i>	Identifier
	<i>id_card</i>	<i>varchar(50)</i>	ID card
	<i>name</i>	<i>varchar(250)</i>	Name
<i>accountant</i>	<i>object</i>	Information about accountant	
Accountant object parameters	<i>id</i>	<i>integer</i>	Identifier
	<i>id_card</i>	<i>varchar(50)</i>	ID card
	<i>name</i>	<i>varchar(250)</i>	Name
<i>sign_empl</i>	<i>object</i>	Information about employee who sign route list	
Signed employee object parameters	<i>id</i>	<i>integer</i>	Identifier
	<i>id_card</i>	<i>varchar(50)</i>	ID card
	<i>name</i>	<i>varchar(250)</i>	Name
<i>reject_empl</i>	<i>object</i>	Information about employee who reject sign of route list	
Rejected employee object parameters	<i>id</i>	Identifier	Identifier
	<i>id_card</i>	ID card	ID card
	<i>name</i>	Name	Name
<i>status</i>	<i>integer</i>	Route list status, possible values: 0 – empty 1 - draft 2- signed 3 – in progress	

			4 – completed 5 - cancelled
forwarder_name	varchar(250)		Name of forwarder
forwarder_id_card	varchar(250)		ID card of forwarder
lic_num	varchar(50)		Transportation licence number
lic_exp_date	varchar(50)		Licence expiration date, format "yyyy-mm-dd"
lic_type	integer		Type of license <i>integer</i>
lic_type_name	varchar(50)		Type name of licence <i>varchar(50)</i>
car_id	integer		Vehicle identifier
car_num	varchar(50)		Vehicle state number <i>varchar(50)</i>
trailer_id	integer		Trailer identifier
trailer_num	varchar(50)		Trailer state number <i>varchar(50)</i>
docs	array		List of document assigned to route list
Waybill object parameters	id	integer	- Waybill identifier <i>integer</i> ,
	num	varchar(50)	- Waybill number <i>varchar(50)</i> ,
	route_list_position	integer	Document position in route list <i>integer</i> ,
	src_address	varchar(1024)	Source address <i>varchar(1024)</i>
	dst_address	varchar(1024)	Destination address <i>varchar(1024)</i> ,
	status	integer	Document status, possible values: 1 - not signed, 2 - waiting for own signature, 3 - waiting for counterparties signature, 4 - signed by all, 5 - signature rejected, 6 - on the way, 7 - delivered, 8 - refused to accept, 9 - accepted by driver, 10 - delivered, not confirmed

Example request:

```
POST /routes_lists/

# Marşrut siyahısı növlərini əldə et

Metod marşrut siyahısı növlərinin siyahısını qaytarır

**Endpoint:** /route\_list\_types/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Method does not use Request parameters

Response:

The response returns a list of waybill types

Parameter	Type	Description
id	integer	Unique identifier of route list type
name	varchar(250)	Name of route list type
series	varchar(10)	Default route list series

Example request:

```
POST /route_list_types/  
Content-Type: application/json
```

Example response:

```
HTTP/1.1 200 OK  
Content-Type: application/json  
[  
  {  
    "id": 2,  
    "name": "Elektron əmtəə-nəqliyyat qaiməsi ilə rəsmiləşdirilmiş yüklərin daşınması",  
    "series": null  
  },  
  {  
    "id": 3,  
    "name": "Elektron əmtəə-nəqliyyat qaiməsi ilə rəsmiləşdirilməsi tələb olunmayan digər yüklərin  
daşınması",  
    "series": null  
  }  
]
```

## Marşrut siyahısı əlavə et və ya yenilə

Metod yeni marşrut siyahısı əlavə etməyə və ya mövcud marşrut siyahısını dəyişməyə imkan verir

**Endpoint:** /save\_route\_list/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Parameter	Type	Description
id	integer	Unique identifier of route list , 0 – creating a new >0 – updating existing
trailer_id	integer	Identifier of vehicle
route_list_type_id	integer	Identifier of route list type
driver_id	integer	Driver employee identifier
car_id	integer	Identifier of vehicle
lic_num	varchar(50)	Transportation licence number
lic_exp_date	varchar(50)	Licence expiration date, format "yyyy-mm-dd"
lic_type_name	varchar(50)	Licence type name
src_address	varchar(1024)	Source address
src_latitude	float	Latitude of source address
src_longitude	float	Longitude of source address
dst_address	varchar(1024)	Destination address
dst_latitude	float	Latitude of destination address
dst_longitude	float	Longitude of destination address
date_from	varchar(50)	Starting date, time of route list , format yyyy.MM.ddThh:mm:ss.fff
date_for	varchar(50)	Ending date, time of route list , format yyyy.MM.ddThh:mm:ss.fff
dispatcher_id	Integer	Dispatcher employee identifier
fuel_auditor_id	integer	Fuel auditor employee identifier
accountant_id	integer	Accountant employee identifier
start_fuel	float	Starting fuel level
current_fuel	float	Current fuel level
stop_fuel	float	Ending fuel level

Response :

Parameter	Type	Description
status	varchar(50)	Status of request, possible values

			error – in case of error
message		<i>varchar(1024)</i>	Detailed information about result
id		<i>integer</i>	Route list identifier
num		<i>varchar(50)</i>	Number of route list
dat		<i>varchar(50)</i>	Date of route list, format "yyyy-mm-ddThh:mm:ss.sss"
date_from		<i>varchar(50)</i>	Starting date of route list, format "yyyy-mm-ddThh:mm:ss.sss"
date_for		<i>varchar(50)</i>	Ending date of route list, format "yyyy-mm-ddThh:mm:ss.sss"
notes		<i>varchar(1024)</i>	Route list notes
obj_id		<i>Integer</i>	Carrier identifier
dst_latitude		<i>float</i>	Latitude of destination address
dst_longitude		<i>float</i>	Longitude of destination address
src_latitude		<i>float</i>	Latitude of source address
src_longitude		<i>float</i>	Longitude of source address
src_address		<i>varchar(1024)</i>	Source address
dst_address		<i>varchar(1024)</i>	Destination address
documents_count		<i>integer</i>	Number of documents in route list
driver		<i>object</i>	Information about driver
Driver object parameters	id	<i>integer</i>	Identifier
	id_card	<i>varchar(50)</i>	ID card
	name	<i>varchar(250)</i>	Name
dispatcher		<i>object</i>	Information about dispatcher
Dispatcher object parameters	id	<i>integer</i>	Identifier
	id_card	<i>varchar(50)</i>	ID card
	name	<i>varchar(250)</i>	Name
fuel_auditor		<i>object</i>	Information about fuel auditor
Fuel auditor object parameters	id	<i>integer</i>	Identifier
	id_card	<i>varchar(50)</i>	ID card
	name	<i>varchar(250)</i>	Name
accountant		<i>object</i>	Information about accountant
Accountant object parameters	id	<i>integer</i>	Identifier
	id_card	<i>varchar(50)</i>	ID card
	name	<i>varchar(250)</i>	Name
sign_empl		<i>object</i>	Information about employee who sign route list
Signed employee object parameters	id	<i>integer</i>	Identifier
	id_card	<i>varchar(50)</i>	ID card
	name	<i>varchar(250)</i>	Name
reject_empl		<i>object</i>	Information about employee who reject sign of route list
Rejected employee object parameters	id	Identifier	Identifier
	id_card	ID card	ID card
	name	Name	Name
status		<i>integer</i>	Route list status, possible values: 0 – empty

		1 - draft 2- signed 3 – in progress 4 – completed 5 - cancelled
forwarder_name	<i>varchar(250)</i>	Name of forwarder
forwarder_id_card	<i>varchar(250)</i>	ID card of forwarder
lic_num	<i>varchar(50)</i>	Transportation licence number
lic_exp_date	<i>varchar(50)</i>	Licence expiration date, format "yyyy-mm-dd"
lic_type	<i>integer</i>	Type of license <i>integer</i>
lic_type_name	<i>varchar(50)</i>	Type name of licence <i>varchar(50)</i>
car_id	<i>integer</i>	Vehicle identifier
car_num	<i>varchar(50)</i>	Vehicle state number <i>varchar(50)</i>
trailer_id	<i>integer</i>	Trailer identifier
trailer_num	<i>varchar(50)</i>	Trailer state number <i>varchar(50)</i>
docs	<i>array</i>	List of document assigned to route list
Waybill object parameters	id	<i>integer</i> - Waybill identifier <i>integer</i> ,
	num	<i>varchar(50)</i> - Waybill number <i>varchar(50)</i> ,
	route_list_position	<i>integer</i> Document position in route list <i>integer</i> ,
	src_address	<i>varchar(1024)</i> Source address <i>varchar(1024)</i>
	dst_address	<i>varchar(1024)</i> Destination address <i>varchar(1024)</i> ,
	status	<i>integer</i> Document status, possible values: 1 - not signed, 2 - waiting for own signature, 3 - waiting for counterparties signature, 4 - signed by all, 5 - signature rejected, 6 - on the way, 7 - delivered, 8 - refused to accept, 9 - accepted by driver, 10 - delivered, not confirmed
id	<i>integer</i>	Unique identifier of vehicle
car_num	<i>varchar(50)</i>	State number of vehicle
carrying	<i>float</i>	Maximum permitted weight
trailer	<i>integer</i>	Vehicle type, possible values: 1 – truck 2 – trailer 3 – semitrailer 4 – tractor
car_model_id	<i>integer</i>	Unique identifier of vehicle model

Example request:

```
POST /save_route_list/  
Content-Type: application/json  
{  
    "car_num": "BH4444AC",  
    "carrying": 35  
}
```

Example response:

```
HTTP/1.1 200 OK  
Content-Type: application/json  
{  
    "trailer_id": 175,  
    "route_list_type_id": 2,  
    "driver_id": 12524,  
    "car_id": 140,  
    "lic_num": "",  
    "lic_exp_date": "",  
    "lic_type_name": "",  
    "src_address": "Baku main Plaza 1",  
    "src_latitude": 40.4,  
    "src_longitude": 49,  
    "dst_address": "Baku beach 1",  
    "dst_latitude": 40.47691302877101,  
    "dst_longitude": 50.3061605252092,  
    "date_from": "2024-03-24T18:39:24.242",  
    "date_for": "2024-04-30T18:39:28.282",  
    "dispatcher_id": 293,  
    "fuel_auditor_id": 9449,  
    "accountant_id": 341,  
    "start_fuel": 9,  
    "current_fuel": 99,  
    "stop_fuel": 999  
}
```

## Marşrut siyahısında qaimələri yenilə

Metod marşrut siyahısına yük qaiməsinin yerini əlavə etməyə, silməyə, dəyişməyə imkan verir

**Endpoint:** /assign\_route\_list/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Parameter	Type	Description
route_list_id	integer	Unique identifier of route list
documents	array	Array of waybill IDs, ordering of elements in the array determines the position of the waybill in the route list

Response :

Parameter	Type	Description
status	varchar(50)	Status of request, possible values error – in case of error
message	varchar(1024)	Detailed information about result

Example request:

```
POST /assign_route_list/  
Content-Type: application/json  
{  
    "route_list_id": 350,  
    "documents": [  
        1002,  
        1000  
    ]  
}
```

Example response:

```
HTTP/1.1 200 OK  
Content-Type: application/json  
{  
    "status": "success"  
}
```

# Marşrut siyahısı üçün imzalama və ya ləğv sorğusu göndər

Metod marşrut siyahısının imzalanmasına başlamağa imkan verir

**Endpoint:** /sign\_route\_list/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Parameter	Type	Description
id	integer	Document identifier
sign_type	varchar(10)	Sign type , possible values: imza – Asan sign sima – Sima sign
reject	integer	Type of request, possible values: false – signing request true – cancel request

Response:

Parameter	Type	Description
status	varchar(50)	Status of request, possible values success – in case of successful request error – in case of error
message	varchar(1024)	Detailed information about result
code	text	In case of sima – qr code in base64 imza – code of signature request
sign_status	varchar(20)	Signing status

Example request:

```
POST /sign_route_list/  
Content-Type: application/json  
{  
    "id": 350,  
    "sign_type": "sima"  
}
```

Example response:

```
HTTP/1.1 200 OK  
Content-Type: application/json  
{
```

```

    "status": "success",
    "code": "data:image/png;base64,

# Marşrut siyahısının imzalanma prosesinin vəziyyətini yoxla

Metod yol vərəqəsinin imzalanma prosesinin vəziyyətini yoxlamağa imkan verir.

**Endpoint:** /check\_sign\_route\_list/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Parameter	Type	Description
<code>id</code>	<i>integer</i>	Document identifier
<code>sign_type</code>	<i>varchar(10)</i>	Sign type , possible values: imza – Asan sign sima – Sima sign

Response:

Parameter	Type	Description
<code>status</code>	<i>varchar(50)</i>	Status of request, possible values success – in case of successful request error – in case of error
<code>message</code>	<i>varchar(1024)</i>	Detailed information about result
<code>sign_status</code>	<i>varchar(20)</i>	Signing status

Example request:

```
POST /check_sign_route_list/  
Content-Type: application/json  
{  
    "id": 350,  
    "sign_type": "imza"  
}
```

Example response:

```
HTTP/1.1 200 OK  
Content-Type: application/json  
{  
    "status": "success",  
    "sign_status": "error",  
    "message": "SIM application error"  
}
```

## Marşrut siyahısını sil

Metod mövcud marşrut siyahısını silməyə imkan verir

**Endpoint:** /del\_route\_list/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Parameter	Type	Description
id	integer	Document identifier

Response:

Parameter	Type	Description
status	varchar(50)	Status of request, possible values success – in case of successful deleting error – in case of error
message	varchar(1024)	Detailed information about result

Example request:

```
POST /del_route_list/  
Content-Type: application/json  
{  
    "id": 350  
}
```

Example response:

```
HTTP/1.1 200 OK  
Content-Type: application/json  
  
{  
    "status": "error",  
    "message": "Can't delete signed document"  
}
```

# Marşrut siyahısının boş mövqelərinin siyahısını əldə et

Metod boş marşrut siyahısının siyahısını qaytarır

**Endpoint:** /stop\_periods/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters (optional):

Parameter	Type	Description
route_list_id	integer	Unique identifier of route list

Response:

The response returns a list of idles

Parameter	Type	Description
id	integer	Unique identifier of idle
date_from	varchar(20)	Date, time of start, format yyyy-MM-ddThh:mm:ss
date_for	varchar(20)	Date, time of start, format yyyy-MM-ddThh:mm:ss
notes	varchar(1024)	Notes

Example request:

```
POST /stop_periods/  
Content-Type: application/json  
{  
    "route_list_id": 351  
}
```

Example response:

```
HTTP/1.1 200 OK  
Content-Type: application/json  
{  
    "total": 1,  
    "items": [  
        {  
            "id": 96,  
            "date_from": "2024-03-12T19:39:03",  
            "date_for": "2024-03-12T22:39:13",  
            "notes": "test"  
        }  
    ]  
}
```

# Marşrut siyahısına boş mövqelər əlavə et və ya yenilə

Metod marşrut siyahısına yeni boş yer əlavə etməyə və ya mövcud olanı yeniləməyə imkan verir

**Endpoint:** /save\_stop\_period/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Parameter	Type	Description
id	integer	Idle record identifier 0 – creating a new waybill >0 – updating existing waybill
route_list_id	integer	Unique identifier of route list
date_from	varchar(20)	Date, time of start, format yyyy-MM-ddThh:mm:ss
date_for	varchar(20)	Date, time of start, format yyyy-MM-ddThh:mm:ss

Response:

Parameter	Type	Description
id	integer	Idle record identifier
route_list_id	integer	Unique identifier of route list
date_from	varchar(20)	Date, time of start, format yyyy-MM-ddThh:mm:ss
date_for	varchar(20)	Date, time of start, format yyyy-MM-ddThh:mm:ss

Example request:

```
POST /save_stop_period/
Content-Type: application/json
{
    "id": 0,
    "date_from": "2024-03-12T19:39:03.000",
    "date_for": "2024-03-12T22:39:13.000",
    "notes": "test",
    "route_list_id": 351
}
```

Example response:

```
HTTP/1.1 200 OK
Content-Type: application/json
{
    "id": 96,
    "date_from": "2024-03-12T19:39:03",
    "date_for": "2024-03-12T22:39:13",
    "route_list_id": 351,
    "notes": "test"
}
```

## Marşrut siyahısından boş mövqeni sil

Metod mövcud boşu marşrut siyahısından silməyə imkan verir

**Endpoint:** */del\_stop\_period/*

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Parameter	Type	Description
<code>id</code>	<i>integer</i>	Idle record identifier
<code>route_list_id</code>	<i>integer</i>	Unique identifier of route list

Response:

Parameter	Type	Description
<code>status</code>	<i>varchar(50)</i>	Status of request, possible values success – in case of successful deleting error – in case of error
<code>message</code>	<i>varchar(1024)</i>	Detailed information about result

Example request:

```
POST /del_stop_period/  
Content-Type: application/json  
{  
    "id": 96,  
    "route_list_id": 351  
}
```

Example response:

```
HTTP/1.1 200 OK  
Content-Type: application/json  
  
{  
    "status": "success"  
}
```

## Marsrut siyahısının PDF surətini əldə et

The method allows to get pdf copy of the route list document.

The language parameter 'X-LANG' can be specified in header of request.

Possible values :

- en
- az

**Endpoint:** /route\_list/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters (required):

Parameter	Type	Description
id	integer	Document identifier

Request parameters (optional):

Parameter	Type	Description
output	varchar(10)	Output format, default binary, possible values: <ul style="list-style-type: none"><li>• binary</li><li>• base64</li></ul>

Response:

The response returns route list pdf copy

Parameter	Type	Description
status	varchar(50)	Parameter is returning only in case of error
message	varchar(1024)	In case of status error, detailed information about cause of the error
data	text	Base64 content in case of output format set to base64

Example request:

```
POST /route_list/
Content-Type: application/json
X-Requested-With: XMLHttpRequest
X-COMPANY-ID: 1
x-lang: en
{
  "id": 4,
  "output": "base64"
}
```

Example response:

```
HTTP/1.1 200 OK
Content-Type: application/json

{
    "data": "..."
}
```

# Qaimələr üçün toplu imzalama sorğusu göndər

Metod çoxlu yol sənədlərinin imzalanmasına başlamağa imkan verir. Toplu imza yalnız Asan imzası üçün mövcuddur.

**Endpoint:** /bulk\_sign\_doc/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Parameter	Type	Description
docs	<i>Array of integer</i>	Array of document identifiers

Response:

Parameter	Type	Description
status	<i>varchar(50)</i>	Status of request, possible values success – in case of successful request error – in case of error
message	<i>varchar(1024)</i>	Detailed information about result
doc_signature	<i>integer</i>	Signature request identifier
phone	<i>varchar(20)</i>	Phone number for Asan sign
status	<i>varchar(20)</i>	Signing status
errors	<i>array_of_objects</i>	List of errors for document list
Error object parameters	doc_id	<i>integer</i> Waybill document identifier
	doc_num	<i>varchar(50)</i> Waybill document number
	error	<i>varchar(1024)</i> Error message
	required_fields	<i>array_of_fields</i> The list of fields that required to be added for successful signing

Example request:

```
POST /bulk_sign_doc/  
Content-Type: application/json  
{  
    "docs": [4578,4579]  
}
```

Example response:

```
HTTP/1.1 200 OK
Content-Type: application/json
{
    "status": "success",
    "doc_signature": 6,
    "sign_status": "in progress",
    "phone": "+994123123123"
}
```

# Qaimələrin toplu imzalanma prosesinin vəziyyətini yoxla

Metod yol sənədləri üçün toplu imzanın gedışat vəziyyətini yoxlamağa imkan verir.

**Endpoint:** /check\_bulk\_sign/

**HTTP Method:** POST

**Authorization:** Bearer <token>

Request parameters:

Parameter	Type	Description
id	integer	Signature request identifier

Response:

Parameter	Type	Description
status	varchar(50)	Status of request, possible values success – in case of successful request error – in case of error
message	varchar(1024)	Detailed information about result
sign_status	varchar(20)	Signing status

Example request:

```
POST /check_bulk_sign/  
Content-Type: application/json  
{  
    "id": 6  
}
```

Example response:

```
HTTP/1.1 200 OK  
Content-Type: application/json  
{  
    "status": "success",  
    "sign_status": "success",  
    "message": "Successfully signed"  
}
```
